DONARIS Vienna Insurance Group

Electronic Archive allowing storing documents generated within the corporate processes or created by employees in the free mode, in a structured way, in a single location

The presence of the Company's offices and mobile personnel in various cities of the country, as well as the use of various equipment by its employees hampered the process of information content and support of insured events, and led to the potential risks associated with the inability to promptly identify potentially fraudulent cases.

Different court requirements to provide information caused excessive labor costs.

It was difficult for the central office staff in a short time to collect information on a specific insured event, because information was often located on different resources.

Implementation

S&T Mold offered to put in place electronic archive allowing storing documents generated within the corporate processes or created by employees in the free mode, in a structured way, in a single location.

E-Archive is designed for a significant number of users and the exponential growth in the volume of information.

For its creation the integrator used the following technologies: Java 8, Apache Tomcat, Spring, Postgre SQL, Apache CXF, REST, HATEOAS, and Angular Js.

The proposed E-Archive is a cloud-based solution for managing information on insured events with the possibility of by all means access, in accordance with the roles, regardless of the employee location.

The S&T Mold E-Archive also allows to consolidate information with possibility of centralized search and access from anywhere in the world.

Donaris VIG Company is a part of Vienna Insurance Group, operating in the insurance market about 190 years.

Currently the VIG Group is represented by 50 companies in 25 countries. It employs 23 thousand employees.

Throughout all its activity, the Company strives to provide insurance products and services to meet individual, family and business needs.

Outcomes

E-Archive offered by S&T Mold allowed Donaris Vienna Insurance Group:

* To consolidate fragmented information with the possibility to search across all levels of its furnishing;

 * To install mobile workplaces for employees;

 * To apply BYOD principles in corporate infrastructure;

 * To manage information efficiently;

 * To avoid excessive labor costs in providing various authorities with information.

S&T was established in Moldova in 1995, as a company representing the Austrian company S&T System Integration&Technology Distribution AG.

Today S&T Mold is a leading provider of IT solutions and services on the Moldovan IT market, as part of the S&T international group of companies that also operates in the Central and Eastern Europe and in the CIS.
